PROJECTS

Python program for the Admission Department of Humber College
- Constructed a Python program for the Admission Department of Humber College to calculate student's high school GPA and assign them to different schools by the level of their marks.
- The project received a score of 92% during evaluation.

Big Data Project of iFood Company KPI Analysis
- Applied managerial financial analysis to analyze KPI such as growth rate, market share, customer satisfaction for iFood Company operating in GTA using Hadoop ecosystem including Hive, Spark, and Hbase as Big Data project evaluated with a grade of 97%.

Volunteer Service Database Project
- The project encompassed various components, including a comprehensive database schema with an Entity-Relationship Diagram (ERD), business rules, strong and weak relationships analysis, primary keys and foreign keys identification, normalization, and a set of SQL queries.
- The project showcased a well-rounded understanding of database design and management principles, receiving a grade of 92%.

Sentiment Analysis of Customer Reviews
- The sentiment analysis revealed a predominantly positive overall sentiment in the dataset, offering valuable insights into customer opinions across various topics and facilitating actionable recommendations for businesses to enhance product/service quality and customer satisfaction using R.
- Employed Random Forest and Naive Bayes classifiers for sentiment classification, achieving accuracies of 80.28% and 82.94%, respectively.
- Identified Naive Bayes as the optimal model for polarity prediction, highlighting its simplicity and effectiveness in handling textual data.

Machine Learning Project of Bank Churn Analysis
- The project focuses on mitigating credit card customer churn in banking by developing predictive models, utilizing Random Forest and Artificial Neural Network, with key business insights emphasizing transaction activity and changes in predicting churn rate, and highlighting the Random Forest model's superior accuracy at 92% compared to the Artificial Neural Network's 87%.
